

Water Reuse and Resource Recovery

In Canada

Quarterly Project Update

Seventh Edition

April 2020

Appreciation

In the midst of the COVID-19 pandemic and the uncertainty that comes with it, water and wastewater service providers are working to consistently supply safe water. We wish to express immense gratitude to everyone working to protect and serve our water.

Who we are

We are a team of researchers and interested parties led through the School of Public Health at the University of Alberta in association with provincial and federal water agencies

Our vision

Understand emerging science issues and use social engagement to understand what is technically possible and socially acceptable for water reuse in Canada

Planning to Plan

In response to the pandemic, we are adapting our research plan. We are working to create virtual spaces to discuss water reuse and resource recovery, and to share the outcomes from our research. We plan to present a range of opportunities, recognizing many are working with new schedules and priorities. As opportunities are planned we will notify you through email.
